

Business Internet Access (Wireless)

SOLUTION OVERVIEW

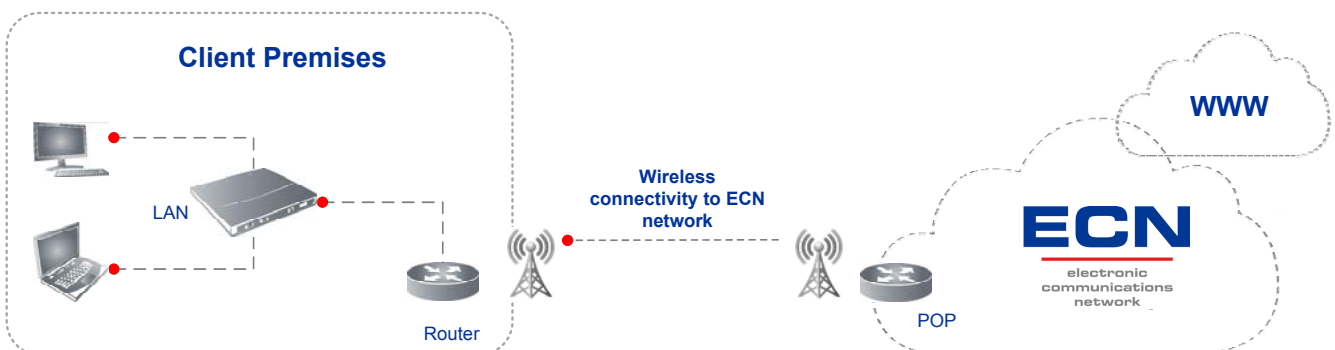

Business Internet Access (Wireless) is a data and / or voice solution which provides businesses with high performance and reliable Internet connectivity over microwave technology. Data and voice are transmitted via a dedicated wireless link from your office to the nearest ECN data centre. Wireless connectivity is subject to coverage and availability. The service supports interim and / or redundant options.

There are compelling advantages to using wireless over other traditional connectivity methods, i.e. high speed, symmetrical upload and download speeds and low latency. Wireless is considered a preferred alternative to fixed line solutions. Business Internet Access (Wireless) is ideal for customers in areas with limited connectivity options.

FEATURES & BENEFITS

- ▶ High speed, low latency Internet access
- ▶ 10 and 20 Mbps options available
- ▶ Supports voice channels
- ▶ Uncapped and unshaped, subject to AUP / FUP
- ▶ Rapid deployment times
- ▶ Service Level Agreements apply
- ▶ Static public IP addresses included
- ▶ 24/7 Network Operations Centre & Helpdesk
