

More security, more efficiency, more reliability

Nashua provides a range of workspace solutions to help Inkulu Plastic Pipes grow with confidence.

Client: Tyba Trading - T/A Inkulu Plastic Pipes (Pty) Ltd
Location: Hammersdale
Category: Manufacturers of plastic pipes
Size: 65 employees

/ Solutions provided:

Office automation, CCTV, telecommunications/PABX and Nashua Wireless.

/ Challenge:

Inkulu Plastic Pipes was experiencing rapid growth as a company and with this growth saw many challenges.

Security and monitoring of their manufacturing plant was becoming a major requirement as their manufacturing process required that they run their factory on a 24-hour basis. Another major requirement was the monitoring of their storage area.

With their phenomenal growth in sales they also needed to establish offices in Cape Town, Gauteng and Botswana, along with printing and telecommunications solutions for those offices.

/ Solutions:

We immediately implemented a PABX solution at their Hammersdale offices with the installation of a PABX and ECN last mile connectivity. This enabled them to have a dedicated operator on switchboard and move away from Telkom, who was, until our inception, the only service provider in the area.

We also increased their printing operation from one multifunctional printer, the MP201, to include a MP2501 and a MPC2004. This allowed Inkulu Plastic Pipes to have better control in their different departments.

To cater to their diverse security requirements we provided them with IP cameras for their factory, which included the industry leading Hikvision DarkFighter PTZ cameras. This solution was also a first for our technical team who had to provide split monitoring at three different points.

/ Outcome:

The directors were so satisfied with the business surveillance and monitoring solutions, that they asked us to assist with security solutions for their homes as well, with a total of 34 cameras being installed.

The relationship of trust and reliability that we nurtured with the client has opened the doors to even more opportunities. To date we have provided additional telecommunications and printing solutions for their Cape Town branch, including installing Nashua Wireless and Fibre solutions.
