

Computing, Connecting
and Collaborating from
anywhere, at any time

NASHUA 
saving you time. saving you money. putting you first.

The Three 'Cs' - Computing, Connecting and Collaborating

The three 'Cs' - computing, connecting and collaborating - are the keys to success in today's world, and more than most, Nashua understands that modern professionals are focused on completing their business tasks quickly and efficiently every time. Thus, regardless of whether these tasks are office bound, out in the field or simply part of the demands of an on-the-go executive, Nashua's range of PCs and Services is designed to facilitate and enable these three 'Cs', whenever and wherever this may be needed.

We understand that that choosing the right equipment and software services can appear a daunting task, particularly considering the wide range of options available in the marketplace. However, at Nashua, we simplify things considerably for you by offering the world's best brands and complementing this with our track record of unmatched service delivery and support.

The Nashua Approach

We begin by carefully analysing the needs of the users, which positions us to work closely with the customer to deliver a simplified, intelligent approach to architecting a solution that is fit for purpose. We not only offer access to the world's best hardware brands, but furthermore complement this with a myriad of Microsoft offerings and end-point services, such as cloud security & data back-up solutions. In addition, with our pro-active Remote Monitoring and Management Services solution, we provide self-healing capabilities, patch and asset management, high CPU and Memory Utilisation alerts, Threshold Management etc. to keep your technology healthy and optimised. Meanwhile, our post warranty support services are best-in-class, next business day support services, delivered directly by the OEMs.

The Technology

Consistency is guaranteed because Nashua-supplied hardware comes standard with Microsoft Windows Professional or Windows Server operating systems and is further supported by Intel's latest generation of processors. What this does, essentially, is it gives your business the computing edge required for you to make light work of any and all everyday tasks. All our hardware is supplied by highly respected vendors, such as Dell, HP and Lenovo, and supported by our highly trained and skilled staff.

Connect, Collaborate, Protect and Store

Technology evolution encompasses not only hardware, but software as well, and the latest software solutions enable users to collaborate, share and communicate, using the kind of flexible tools that are effective no matter where you go, or where your workspace is.

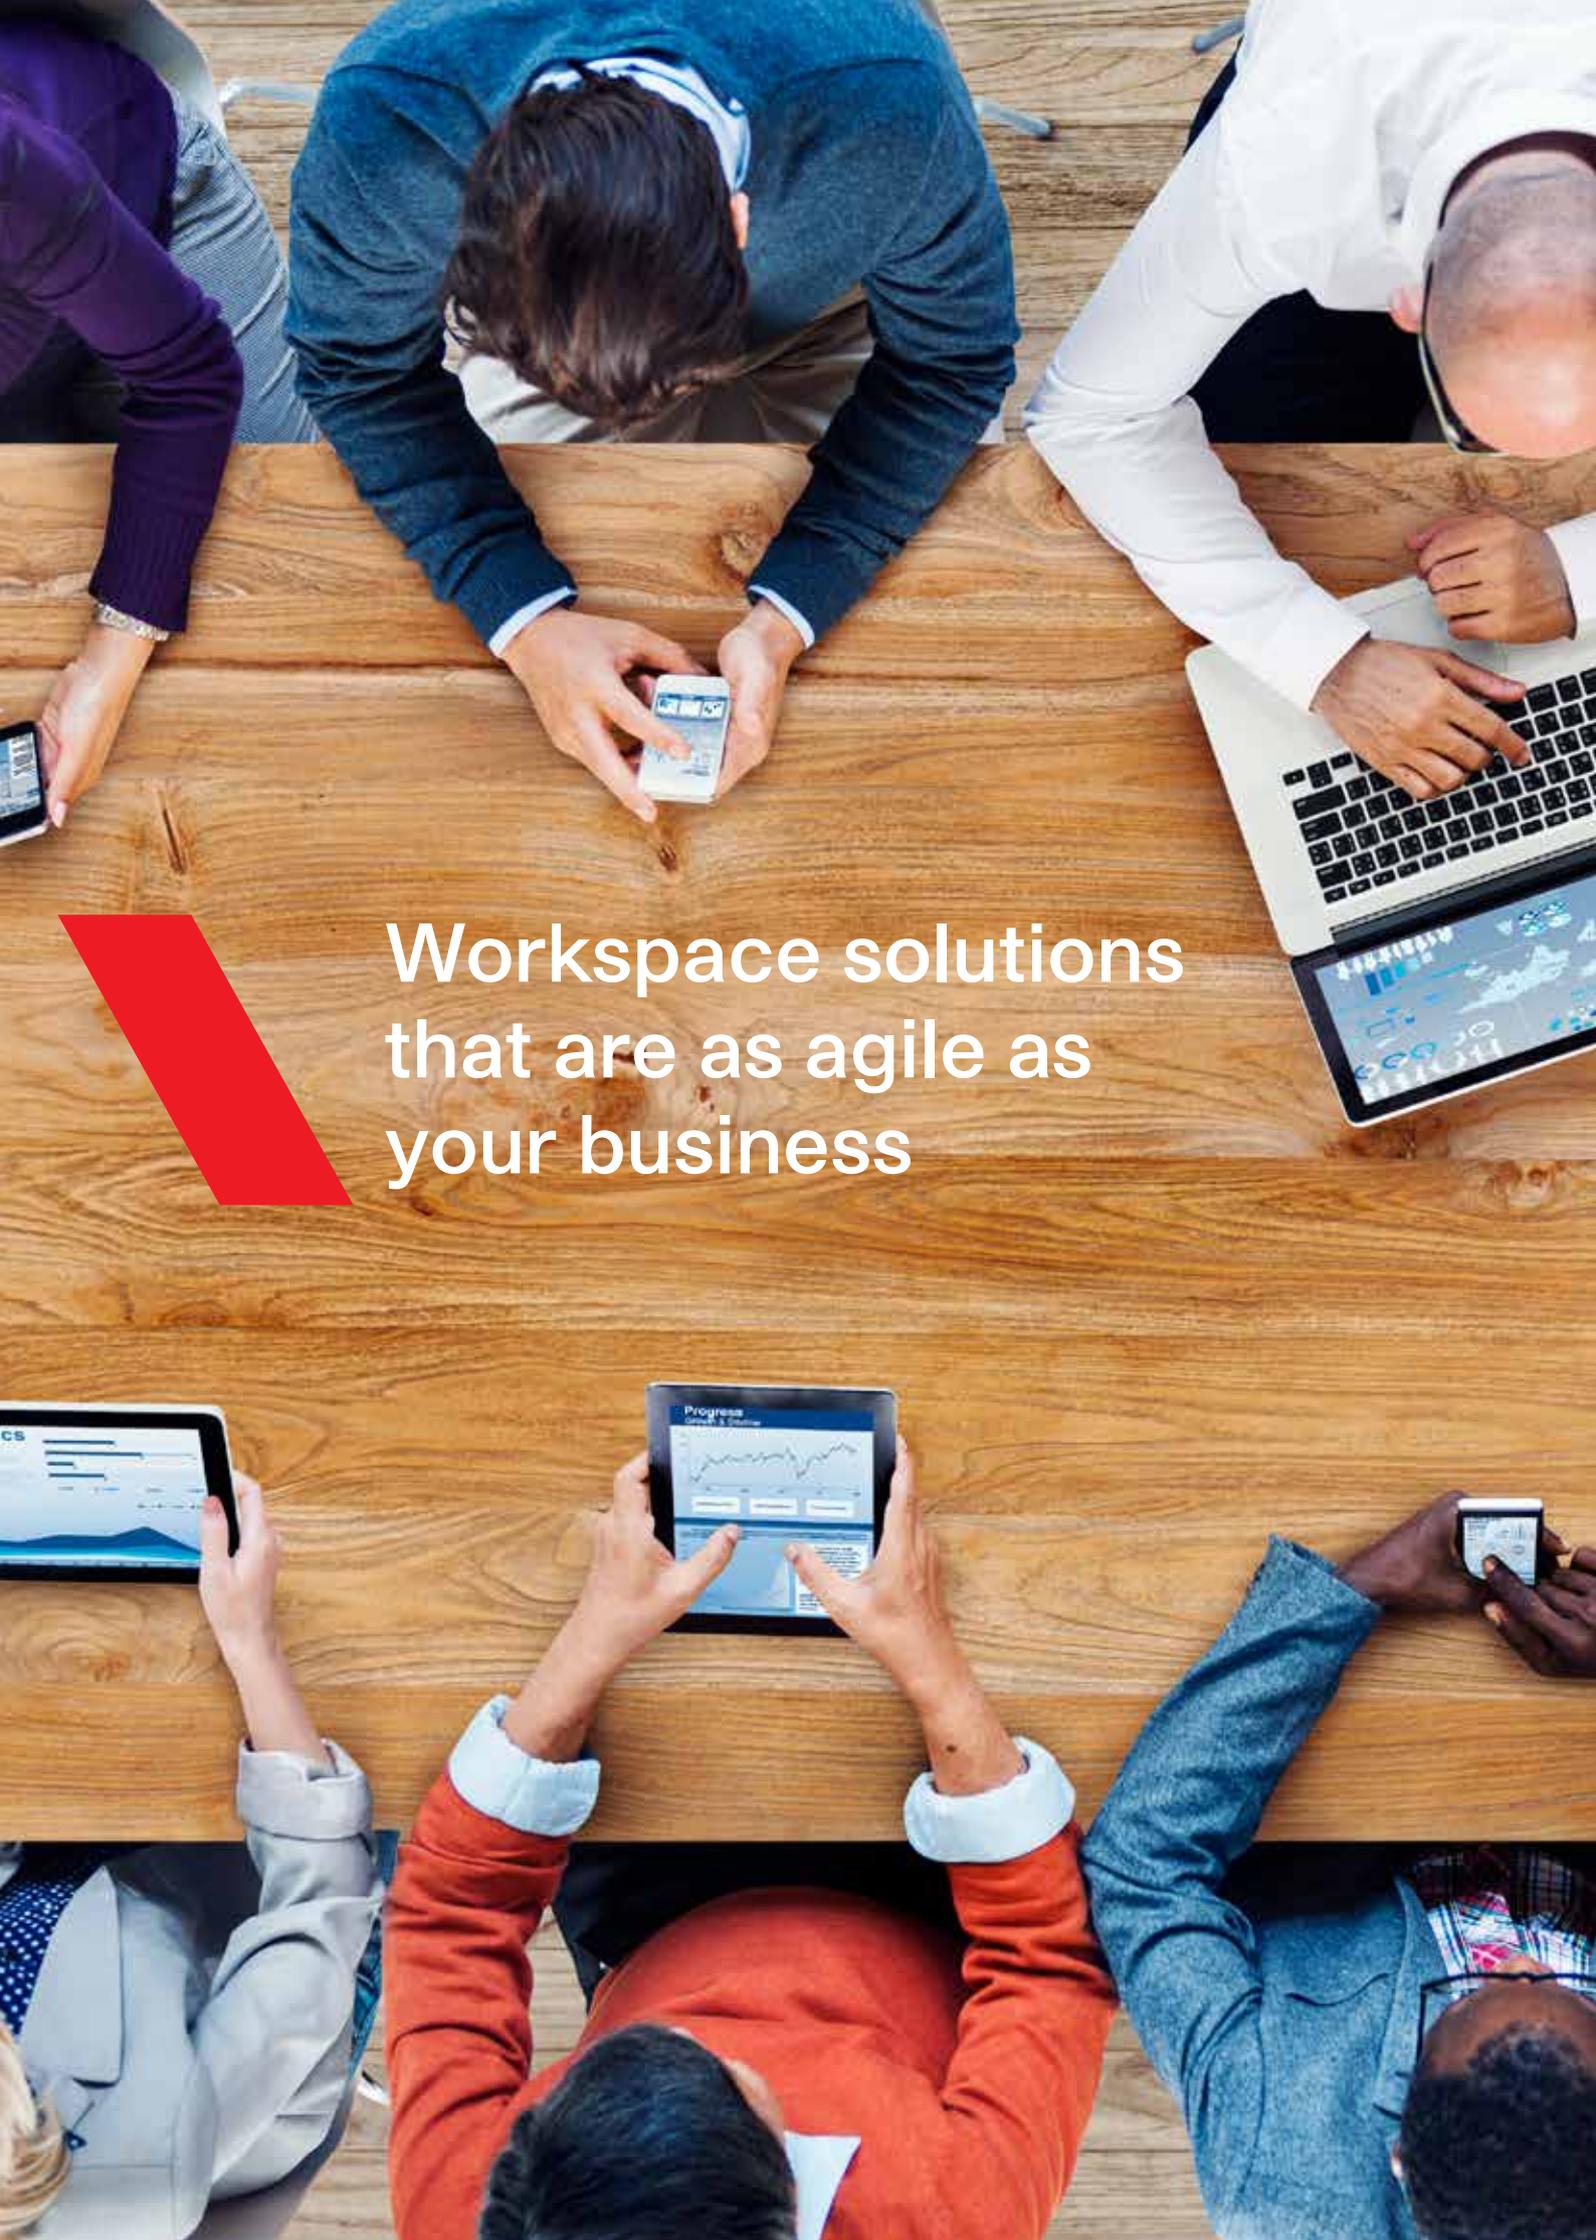

Office 365 allows users to easily collaborate, share and communicate with all parties. This means being able to work on documents with your team and collaborate in the cloud with Microsoft's OneNote, or to work more efficiently with email, calendar, contacts, tasks and more – all together in one place. Office integration even lets you share attachments right from OneDrive, or access contacts as needed. With our deep knowledge of ICT and best-in-class, secure solutions, Nashua can help you to choose the right productivity suite for your business.

Get Licensed

Microsoft 365 brings together Office 365, Windows 10, and Enterprise Mobility + Security. It delivers a complete, intelligent solution to empower employees to be creative and work together, securely. Nashua also offers Microsoft 365 Enterprise Licensing for larger organisations, with E1, E3 and E5 licensing options available. Moreover, if your business already has a Microsoft 365 subscription, we will provide seamless migration services, taking the hassles out of renewing or upgrading your solutions.

An overhead view of a long wooden table where several people are seated. They are using various mobile devices: a smartphone, a laptop, and a tablet. The laptop screen shows a data dashboard with charts and graphs. The tablet also displays a 'Progress' dashboard with a line graph. The people are dressed in business casual attire. Workspace solutions
that are as agile as
your business

Stay Secure

After hardware and software, the third leg of any IT strategy is security, which is more important than ever in a digitising world where data is the new currency. After all, threats that are no longer limited to the confines of our computers, but are prevalent in every aspect of our connected world.

This constantly changing threat matrix can become a daunting task to manage daily, which is why our endpoint security solutions are designed to enable you to combat fileless, zero-day, ransomware and nuisance attacks. This is done via an advanced augmented defence and a unified management experience. Our security solutions are simple to deploy and are affordable, making Nashua's End Point Security offerings an essential component of your computing experience.

Always Back Up

A vital component of security is the ability to back your information up, and Nashua's Backup Cloud solution protects more than 20 platforms and incorporates the backup industry's most advanced anti-ransomware technology, safeguarding data and systems in any environment – physical or virtualised, on-premises or in the cloud.

As a turnkey, software as a service (SaaS)-based solution, it is as seamless to deploy as it is to manage and has almost no impact on system performance, nor does it add any complexity to your IT infrastructure. It is also worth noting that in addition to backing up your end point device files, our solution also caters for backups in respect of Microsoft 365.

Be Pro-Active

Nashua's PC's and Services offering have been specifically designed to deliver a modern computing experience that will give your business the computing edge and help you to make light work of everyday tasks, this alone is not enough. Being able to maintain and support the above is of just as much importance, and it is here that Nashua's Remote Monitoring and Management Services (RMMS) offering come into their own. Nashua provides solutions that will reliably monitor and instantly alert users about any irregularities across a wide range of devices, including Desktops, Notebooks, Surveillance, Access Control Systems, PBXs and IP Phones.

Our intelligent, simplified approach to pro-active Remote Monitoring and Management Services, which ensures better uptime for you without you even knowing or having to think about it, is backed by warranties from the world's leading hardware and software vendors. This means that no matter where your business is in South Africa, we have you covered. In fact, thanks to our expanding African footprint, we are also able to offer the same level of pro-active management and support services across Botswana, Namibia, Eswatini and Lesotho.

Ultimately, our turnkey solution is designed to do more than simply proactively monitor your equipment – it will help you to manage your IT assets through their entire lifecycle, encompassing every aspect of this, including warranties, device aging and refresh cycles.

when you need it**

Get Wise and Accessorise

In keeping with our promise to deliver a true end-to-end service, Nashua can also offer customers a host of must-have accessories to thoroughly complement your work tools. These range from screens, to wireless keyboards and mouses, to the latest docking stations and ergonomically designed notebook power banks that make great travelling partners to keep you always on.

We offer a full range of OEM desktop accessories from Dell, HP and Lenovo, as well as generic ones from other leading brands. We also have an extensive range of mobile accessories – from bags to power options – that are designed to support each end user’s chosen lifestyle.

Why us?

When it comes to analysing, architecting, implementing and supporting a complete computing solution for your business, Nashua has the skills and experience to deliver, we have access to the best hardware, software and security solutions to ensure that your IT future will be a journey, rather than a climb.
